This relationship was significant, but weak (Spearman’s correlation coefficient = -0.39, p < .001). In other words, fear of going to work at this time may be about more than having adequate safety equipment.

Methods: REDCap online survey was distributed starting May 18, 2020 to primary care professionals and organizations nationally, including: NAPCRG, AAFM, CFHA, SGIM, UVM Medical Center, Kaiser Northern California, California Nurses Association, reddit, twitter, etc. Recruitment efforts will continue throughout the COVID-19 crisis. Participants can choose to complete the survey once or several times. The survey occurs weekly and is dynamic in order to include pressing questions.

Participants: As of July 13, 2020, we have recruited 585 respondents from 49 states. Including 37% physicians, 9% nurse practitioners and physician assistants, 17% nurses, 10% medical assistants, 14% behavioral health providers, 7% administrative support staff, and 6% other; 75% of participants are women, 81% white, and the average years working in their current role is 10 years (median; 0.1 to 70 years).
