

### Firestone Medical Research Building Construction Notice #3

November 24th through December 31<sup>st</sup>

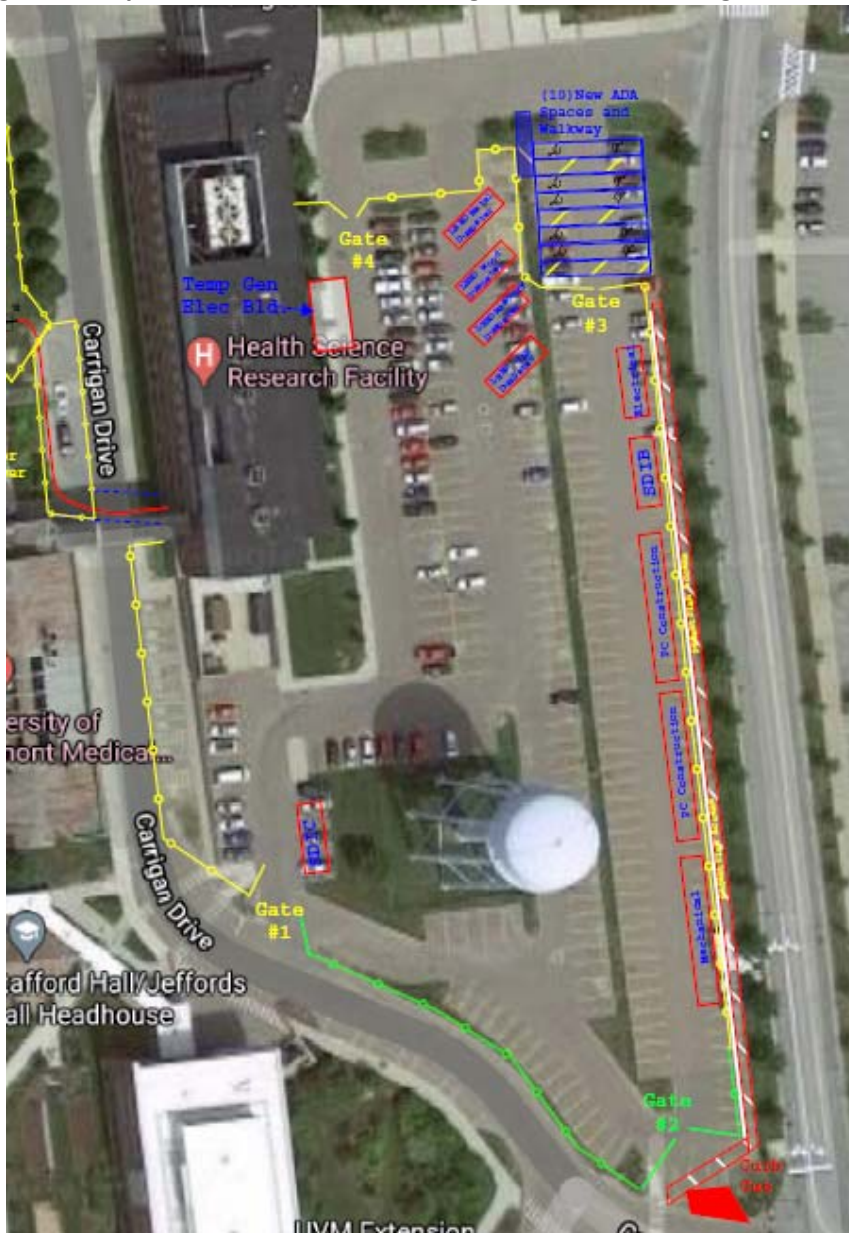

Happy Thanksgiving! We will cross the two-months of construction milestone on December 5<sup>th</sup> - progress can be seen on a daily basis. For the remaining ~6-weeks of 2020, work will focus on:

1. ELECTRICAL: Transitioning electrical power from a transformer located near the HSRF loading dock to a transformer located near the Hills building.
2. EXCAVATION: The demolition of the HSRF loading dock area and initial site excavation to emplace the Firestone Medical Research building's foundation. From an overall vibration and noise perspective, we expect this phase of the project to be the most disruptive.
3. PARKING: The commissioning of the new Jeffords East parking lot (see figure A) will facilitate the expansion of the perimeter fencing in the Given parking lot (see figure B). We expect this transition will occur the week of December 7<sup>th</sup> - more information on the effective date of transition will be provided shortly after the Thanksgiving break.
